EDUCATION

Towson University, Towson, MD *B.S. Computer Science — May 2025*
GPA: 3.8/4.0

- **Key Coursework:** Data Structures & Algorithms, Operating Systems, Database Management Systems, Mobile App Development, Software Quality Assurance & Testing, Object-Oriented Programming, Web-Based Programming
- **Honors:** Cum Laude, 8x Dean's List

TECHNICAL SKILLS

Languages: Java, Swift, Python, JavaScript/TypeScript, SQL, C++, HTML/CSS
Frameworks & Libraries: Spring Boot, React, Node.js, Express, SwiftUI, JUnit
Databases & Tools: MySQL, MongoDB, Git, AWS, Docker, Firebase

EXPERIENCE

AI Builder Fellow Baltimore, MD
Ekiben Oct 2026 – Present

- Collaborate directly with the Chief of Staff and managers to understand operational challenges, gather requirements, and identify opportunities for technical solutions.
- Build internal applications and automation tools based on stakeholder needs, including operational dashboards, project tracking systems, and interactive employee training platforms.
- Develop data-driven workflows to streamline inventory ordering, product pricing, store operations, and management reporting.

AI Builder Fellow Baltimore, MD
Just Ventures Sep 2026 – Present

- Interviewed business owners to identify operational bottlenecks and prioritize opportunities for AI automation.
- Translated stakeholder requirements into AI workflows with validation rules and human approval checkpoints.
- Designed multi-step workflows that tracked evidence and flagged missing or conflicting information before decisions.
- Tested workflow outputs against defined scenarios, identifying failure cases and improving reliability through iterative refinement.

Independent iOS Developer Remote
Self-Employed Jan 2025 – Apr 2026

- Shipped 14 native iOS apps to the App Store, reaching over 7,000 downloads and maintaining a 4.6 average rating.
- Managed the full product lifecycle, from concept and Figma design through development, testing, and App Store launch.
- Generated over $1,500 in revenue through app subscriptions and in-app purchases.

PROJECTS

University Marketplace Feb 2025

- Built a MERN marketplace with verified .edu registration, real-time chat, and Stripe payments to enable secure transactions within a university community.
- Designed MongoDB schemas and optimized queries to support efficient listing retrieval and filtering as marketplace data grows.
- Implemented role-based access controls and input validation to restrict unauthorized actions and prevent invalid data submissions.

nVolve — Event Discovery App Nov 2024

- Developed a SwiftUI event discovery app using REST APIs and CoreLocation to help users find events based on their location.
- Built MapKit-based browsing, filtering, and favorites to make discovering and revisiting nearby events easier.
- Preserved favorited events and user preferences across app sessions, reducing the need for users to repeat previous selections.

Movie Recommender Web App May 2024

- Collaborated in a four-person Agile team to build a movie recommendation web app integrating a Java/Spring backend, MySQL, and OpenAI GPT-3.
- Implemented JWT authentication to protect user-specific functionality and deployed the application in a Dockerized environment.
- Used OpenAI GPT-3 to generate recommendations from user preferences and search criteria, helping users discover movies tailored to their interests.
